### Risk and reward profile

The Risk and Reward Indicator table demonstrates where the Fund ranks in terms of its potential risk and reward. The higher the rank the greater the potential reward but the greater the risk of losing money. It is based on past data, may change over time and may not be a reliable indication of the future risk profile of the Fund. The shaded area in the table below shows the Fund's ranking on the Risk and Reward Indicator.

Typically lower rewards,  
lower risk

Typically higher rewards,  
higher risk

- This Fund is ranked at 6 because funds of this type have experienced high rises and falls in value in the past. Please note that even the lowest risk ranking can lose you money and that extreme market circumstances can mean you suffer severe losses in all cases. The indicator does not take into account the following risks of investing in this Fund:
- This Fund may be unable to invest in certain sectors and companies due its specialist nature. This may mean that the Fund is more sensitive to price swings than other funds.
- Investing overseas can bring additional returns and spread risk to different markets. There are risks, however, that changes in currency rates will reduce the value of your investment.
- Smaller company shares may be riskier as they can be more difficult to buy and sell and their share prices may move up and down more than larger companies.
- This Fund holds a limited number of investments. If one of these investments falls in value this can have a greater impact on the Fund's value than if it held a larger number of investments.

## Charges
